(54) Title: ACIDS AND ACID SALTS AND THEIR USE IN DELIVERY SYSTEMS

(57) Abstract

The present invention relates to a delivery system, and in particular to carboxylic acids for use as a delivery system of sensitive agents such as bioactive peptides. The carboxyl acids and salts can form non-covalent mixtures with active biologically-active agents. These mixtures are suitable for oral administration of biologically active agents to animals.

ACIDS AND ACID SALTS AND THEIR USE IN DELIVERY SYSTEMS

The present invention relates to compositions suitable for drug delivery, and in particular to compositions in which carboxylic acids and salts are used as carriers for biologically-active agents, including, but not limited to, bioactive peptides and the like. The acids and salts can form non-covalent mixtures with biologically-active agents and are suitable for oral administration to animals. Methods for the preparation and for the administration of such compositions are also disclosed.

10

Background of the Invention

Conventional means for delivering biologically-active agents, including, but not limited to, pharmaceutical and therapeutic agents to animals often are severely limited by 15 chemical and physical barriers imposed by the body. delivery of many biologically-active agents would be the route of choice if not for the presence of chemical and physicochemical barriers such as extreme and varying pH in the gastrointestinal (GI) tract, exposure to powerful digestive enzymes, and impermeability of gastro-intestinal membranes to the active ingredient. Among the numerous pharmacological agents which are are not suitable for oral administration are biologicallyactive peptides such as calcitonin and insulin. Examples of other compounds which are affected by the physico-chemical barriers are polysaccharide mucopolysaccharides, including, but not limited to, heparin, heparinoids, antibiotics and other organic substrates. These agents are rapidly destroyed in the

PCT/US95/05110

gastro-intestinal tract by acid hydrolysis, enzymes, or the like.

Prior methods for orally administering vulnerable pharmacological agents have relied on co-administration of adjuvants (e.g., resorcinols and non-ionic surfactants such as polyoxyethylene oleyl ether and n-hexadecyl polyethylene ether) to increase artificially the permeability of the intestinal walls; and on co-administration of enzymatic inhibitors (e.g., pancreatic trypsin inhibitor, diisopropylfluorophosphate (DFF) and trasylol) to avoid enzymatic degradation. Liposomes have also been described as drug delivery systems for insulin and heparin. See, for instance, U.S. Patent No. 4,239,754; Patel et al. (1976) FEBS Letters Vol. 62, page 60; and Hashimoto et al. (1979) Endocrinol. Japan, Vol. 26, page 337. The broader use of the aforementioned methods, however, as drug delivery systems are precluded for reasons which include: (1) the use of toxic amounts of adjuvants or inhibitors; (2) the lack of suitable low MW cargoes; (3) the poor stability and inadequate shelf life of the systems; (4) difficulty in manufacturing; and the failure of the systems to protect the active ingredient; and (6) the failure of the systems to promote absorption of the active agent.

More recently, microspheres of artificial polymers or proteinoids of mixed amino acids have been described for delivery of pharmaceuticals. For example, U.S. Patent No. 4,925,673 describes such microspheres as well as methods for their preparation and use. The proteinoid microspheres of the '673 patent are useful for encapsulating a number of active agents.

There is a need in the art for a simple and inexpensive delivery system which is easily prepared and which can deliver a broad range of biologically-active agents.

Summary of the Invention

Compositions for orally delivering biologicallyactive agents incorporating acids and acid salts as carriers are provided. A composition comprising;

- (A) at least one biologically-active agent; and
- (B) (a) a compound having the formula:

R-CO₂H

wherein R is C_1 to C_{24} alkyl, C_2 to C_{24} alkenyl, C_3 to C_{10} cycloalkyl, C_3 to C_{10} cycloalkenyl, phenyl, naphthyl, $(C_1$ to C_{10} alkyl)phenyl, $(C_2$ to C_{10} alkenyl)phenyl, $(C_1$ to C_{10} alkyl)-naphthyl, $(C_2$ to C_{10} alkenyl)naphthyl, phenyl $(C_1$ to C_{10} alkyl), phenyl $(C_2$ to C_{10} alkenyl), naphthyl $(C_1$ to C_{10} alkyl) and naphthyl $(C_2$ to C_{10} alkenyl);

R being optionally substituted with C_1 to C_{10} alkyl, C_2 to C_{10} alkenyl, C_1 to C_4 alkoxy, -OH, -SH, - CO_2R^1 , C_3 to C_{10} cycloalkyl, C_3 to C_{10} cycloalkenyl, heterocyclic having 3-10 ring atoms wherein the hetero atom is one or more atoms of N,

- 15 O, S or any combination thereof, aryl, $(C_i \text{ to } C_{10} \text{ alk}) \text{ aryl}$, aral $(C_i \text{ to } C_{10}) \text{ alkyl}$, or any combination thereof;
 - R being optionally interrupted by oxygen, nitrogen, sulfur, or any combination thereof; and
 - R^1 is hydrogen, C_1 to C_4 alkyl or C_2 to C_4
- 20 alkenyl;

35

- (b) a salt thereof; or
- (c) a combination of (a) and (b).

In an alternative embodiment, these compositions are used in oral dosage unit forms. The compositions or oral dosage unit forms be orally administrated to animals.

Description of the Drawings

Figure 1 is a graphic illustration of the results of oral gavage testing in rats using calcitonin with cyclohex-anepropanoic acid carrier.

Figures 2 and 3 are graphic illustrations of the results of oral gavage testing in rats using heparin with cyclohexanepropanoic acid and cyclohexane carboxylic acid carriers.

Figure 4 is a graphic illustration of the results of oral gavage testing in rats using heparin with cycloheptane-

30

35

carboxylic acid, cyclohexanecarboxylic acid and cyclopentane-carboxylic acid carriers.

Figures 5 and 6 are graphic illustrations of the effects of varying the carrier loading and the cargo loading in oral gavage testing in rats using heparin with cyclohexanepropanoic acid carrier.

Detailed Description of the Invention

Carboxylic acids and salts of carboxylic acids may be used as carriers to deliver biologically-active agents, such 10 as peptides, mucopolysaccharides, carbohydrates, lipids and These carriers are particularly useful pesticides. facilitating the delivery of orally sensitive biologically-For example, hormones such as calcitonin, active agents. insulin and polysaccharides such as heparin, are not considered 15 orally administrable for various reasons. Insulin. example, is sensitive to the denaturing conditions of the gastrointestinal (GI) tract. Also, heparin, by virtue of its charge and hydrophilic nature, is not readily absorbed from the 20 gastro-intestinal tract.

The compositions of the subject invention are useful for administering biologically-active agents to any animals such as birds; mammals, such as primates and particularly humans; and insects.

The present invention, in several embodiments, uses readily available and inexpensive starting materials and provides a cost-effective method for preparing and isolating acids or salts thereof. The method is simple to perform and is amenable to industrial scale-up for commercial production.

Biologically-active agents suitable for use with carriers disclosed herein include, but are not limited to, peptides, and particularly small peptide hormones, which by themselves pass slowly or not at all through the gastrointestinal mucosa and/or are susceptible to chemical cleavage acids and enzymes in the gastrointestinal tract: polysaccharides and particularly mixtures οf mucopolysaccharides, carbohydrates; lipids; or any combination Examples include, but are not limited to, human thereof.

growth hormone; bovine growth hormone; growth hormone releasing hormone; interferons; interleukin-I; insulin; heparin, and particularly low molecular weight heparin; calcitonin; erythropoietin; atrial naturetic factor; antigens; monoclonal antibodies; somatostatin; adrenocorticotropin; gonadotropin releasing hormone; oxytocin; vasopressin; vancomycin; cromylyn sodium; desferrioxamine (DFO); or any combination thereof.

The carboxylic acids of the present invention have the formula: $R-CO_2H$

wherein R is C₁ to C₂₄ alkyl, C₂ to C₂₄ alkenyl, C₃ to C₁₀ cycloalkyl, C₃ to C₁₀ cycloalkenyl, phenyl, naphthyl, (C₁ to C₁₀ alkyl)phenyl, (C₂ to C₁₀ alkenyl)phenyl, (C₁ to C₁₀ alkyl)-naphthyl, (C₂ to C₁₀ alkenyl)naphthyl, phenyl(C₁ to C₁₀ alkyl), phenyl(C₂ to C₁₀ alkenyl), naphthyl(C₁ to C₁₀ alkyl) and naphthyl(C₂ to C₁₀ alkenyl);

R being optionally substituted with C_1 to C_{10} alkyl, C_2 to C_{10} alkenyl, C_1 to C_4 alkoxy, -OH, -SH, - CO_2R^1 , C_3 to C_{10} cycloalkyl, C_3 to C_{10} cycloalkenyl, heterocyclic having 3-10 ring atoms wherein the hetero atom is one or more atoms of N, C_1 0, C_2 1, C_3 2, C_3 3, C_4 4, C_4 5, C_5 6, C_{10} 6, C_{10} 7, C_{10} 8, C_{10} 9, C_{10} 8, C_{10} 9, C_{10} 9, C

R being optionally interrupted by oxygen, nitrogen, sulfur, or any combination thereof; and

 $\mbox{\ensuremath{R^1}}$ is hydrogen, $\mbox{\ensuremath{C_1}}$ to $\mbox{\ensuremath{C_4}}$ alkyl or $\mbox{\ensuremath{C_2}}$ to $\mbox{\ensuremath{C_4}}$ 25 alkenyl.

The preferred carboxylic acids are cyclohexanecarboxylic acid, cyclopentanecarboxylic acid, cycloheptanecarboxylic acid, hexanoic cyclohexanepropanoic acid, methylcyclohexanecarboxylic acid, 1,2-cyclohexanedicarboxylic acid, 1,3-cyclohexanedicarboxylic acid, 1,4-cyclohexanedicarboxylic acid, 1-adamantanecarboxylic acid, phenylpropanoic acid, adipic acid, cyclohexanepentanoic acid, cyclohexanebutanoic acid, pentylcyclohexanoic acid, 2cyclopentanehexanoic acid, cyclohexanebutanoic acid, and (4methylphenyl) cyclohexane acetic acid.

Additionally the carriers of the present invention can be used to deliver other active agents such as pesticides and the like.

In one embodiment, acids and salts thereof may be used directly as a drug delivery carrier by simply mixing the acids or salts with the active ingredient prior to administration. The acids and salts of the invention are particularly useful for the oral administration of certain biologically-active agents, e.g., small peptide hormones, which, by themselves, do not pass or only pass slowly through the gastro-intestinal mucosa and/or are susceptible to chemical cleavage in the gastrointestinal tract.

The carboxylic acids and salts of the invention do not alter the physiological and biological properties of the active agent. The system is particularly advantageous for delivering chemical or biological agents which otherwise would be destroyed or rendered less effective by conditions encountered within the body of the animal to which it is administered, before the agent reaches its target zone and pharmacological agents which are poorly absorbed in the gastro-intestinal tract. The target zones can vary depending upon the drug employed.

Typically, the compositions of the present invention are prepared by mixing an aqueous solution of the carrier with an aqueous solution of the active ingredient, just prior to administration. Alternatively, the carrier and biologically active ingredient can be admixed during the manufacturing process. The solutions may optionally contain additives such as phosphate buffer salts, citric acid, acetic acid, gelatin and gum acacia.

In practicing the invention, stabilizing additives may be incorporated into the carrier solution. With some drugs, the presence of such additives promotes the stability and dispersibility of the agent in solution.

The stabilizing additives may be employed at a concentration ranging between about 0.1 and 5 % (W/V), preferably about 0.5 % (W/V). Suitable, but non-limiting, examples of stabilizing additives include gum acacia, gelatin, methyl cellulose, polyethylene glycol, and polylysine. The preferred stabilizing additives are gum acacia, gelatin and methyl cellulose.

The amount of active agent in the composition typically is a pharmacologically or biologically effective However, the amount can be less than pharmacologically or biologically effective amount when the composition is used in a dosage unit form, such as a capsule, a tablet or a liquid, because the dosage unit form may contain carrier/biologically-active multiplicity of compositions or may contain a divided pharmacologically or biologically effective amount. The total effective amounts will be administered by cumulative units containing, in total, pharmacologically or biologically active amounts biologically-active agent.

The total amount of biologically-active agent to be used can be determined by those skilled in the art. However, it has surprisingly been found that with certain biologically-active agents, such as calcitonin, the use of the presently disclosed carriers provides extremely efficient delivery. Therefore, lower amounts of biologically-active agent than those used in prior dosage unit forms or delivery systems can be administered to the subject, while still achieving the same blood levels and therapeutic effects.

The amount of carrier in the present composition is a delivery effective amount and can be determined for any particular carrier or biologically-active agent by methods known to those skilled in the art.

Dosage unit forms can also include any of excipients; diluents; disintegrants; lubricants; plasticizers; colorants; and dosing vehicles, including, but not limited to water, 1,2-propane diol, ethanol, olive oil, or any combination thereof.

Administration of the present compositions or dosage unit forms preferably is oral or by intraduodenal injection.

EXAMPLES

25

30

The invention will now be illustrated in the following non-limiting examples which are illustrative of the invention but are not intended to limit the scope of the invention.

WO 95/28920 PCT/US95/05110

8.

EXAMPLE 1

GENERAL PROCEDURE FOR THE PREPARATION OF CARBOXYLIC ACID SODIUM SALTS

The carboxylic acid is stirred with a minimal volume of water at room temperature. The mixture is adjusted to pH 7-7.5 by the portionwise addition of 2N aqueous sodium hydroxide. The resulting clear solution is lypholyzed to give the desired carboxylic acid sodium salt as a white powder in quantitative yield.

10

EXAMPLE 2

PREPARATION OF CALCITONIN DOSING SOLUTION

Cyclohexanepropionic acid sodium salt (800 mg) was placed in a test tube. Distilled water (3 mL) was added. The mixture was stirred to effect solution and the pH was adjusted to between 7.0-7.6 with sodium hydroxide or hydrochloric acid. The volume of added acid or base was recorded. The total volume of the solution was brought to 4 mL by the addition of distilled water. Calcitonin (20 ug) was added to the solution. The final carrier concentration was 200 mg/mL and the final

calcitonin concentration was 5 ug/mL.

A similar process was used to prepare all of the dosing solutions used in these carboxylic acid sodium salt experiments.

25

20

EXAMPLE 3

ORAL DELIVERY OF CALCITONIN TO RATS

For each sample, six fasted rats were anesthetized. The rats were administered, by oral gavage, one of the calcitonin/carrier dosages prepared as above. The calcitonin concentration in each sample was 1.5 ug/mL. Each rat was administered a dosage of two mL/kg. Blood samples were collected serially from the tail artery. Serum calcium was determined by testing with a Demand Calcium Kit (available from Sigma Chemical Company, St. Louis, Missouri, USA). The results of the test are illustrated in Figure 1.

EXAMPLE 4

PREPARATION OF HEPARIN DOSING SOLUTION

Cyclohexanepropionic acid sodium salt (900 mg) was added to 1,2-propanediol (4.5 mL) in a test tube and labelled Solution A. In another test tube, sodium heparin (300 mg) was added to a aqueous solution (4.5 mL) of 1.7N citric acid and 1.0% gum acacia and labelled Solution B. Both solutions were vortexed and heated in a water bath at about 37°C for 15 minutes. Solution A was then poured into Solution B giving a mixture having a pH of about 4-5. The final carrier concentration was 100 mg/mL and the heparin concentration was 33.3 mg/mL. The pH of this solution could be adjusted to neutral by the addition of 50 mTrizma® hydrochloride buffer.

Following a similar procedure, a sample having cyclohexane carboxylic acid (900 mg) and sodium heparin (300 mg) was prepared. The solution had a heparin concentration of 33.3 mg/ml.

ORAL DELIVERY OF HEPARIN TO RATS

20 EXAMPLE 5

For each sample, five fasted rats were anesthetized. The rats were administered, by oral gavage, one of the heparin/carrier dosages prepared in Example 4. The heparin activity in plasma was determined by use of the activated partial thromboplastin time (APTT; J.B. Henry, Clinical Diagnosis and Management by Laboratory Methods, Philadelphia: W.B. Saumders, 1979). The results of this test are illustrated in Figure 2.

30 EXAMPLE 6

Two samples having 300 mg/kg of cyclohexanepropanoic acid and 50/mg/kg of Heparin and 300 mg/kg of cyclohexanecarboxylic acid and 50 mg/kg of heparin, respectively, were prepared. These were administered by oral gavage to rats. The results are illustrated in Figure 3.

EXAMPLE 7

Three samples having 300 mg/kg of cycloheptanecarboxylic acid and 50 mg/kg of heparin and 300 mg/kg of cyclohexanecarboxylic acid and 50 mg/kg of heparin and 300 mg/kg of cyclopentanecarboxylic and 30 mg/kg of heparin, respectively, were prepared. These were administered by oral gavage to rats. The results are illustrated in Figure 4.

10 EXAMPLE 8

Three samples having 100 mg/kg, 300 mg/kg and 500 mg/kg of cyclohexanepropanoic acid and 25 mg/kg of heparin, respectively, were prepared. These were administered by oral gavage to rats. The results are illustrated in Figure 5.

15

20

EXAMPLE 9

Three samples having 300 mg/kg cyclohexanepropanoic acid and 25 mg/kg, 50 mg/kg and 100 mg/kg of heparin, respectively, were prepared. These were administered by oral gavage to rats. The results are illustrated in Figure 6.

EXAMPLE 10

Further compositions of carriers with heparin were prepared and tested. The results are in Table 1.

All patents, patent applications, literature publications and test methods cited herein are hereby incorporated by reference.

Many variations of the present invention will suggest themselves to those skilled in the art in light of the above detailed disclosure. All such modifications are within the full intended scope of the appended claims.

WHAT IS CLAIMED IS:

- 1. A composition comprising;
 2 (A) at least one biological
 - (A) at least one biologically-active agent; and
- 3 (B) (a) a compound having the formula:

4 R—CO₂H

wherein R is C_1 to C_{24} alkyl, C_2 to C_{24} alkenyl, C_3 to C_{10} 6 cycloalkyl, C_3 to C_{10} cycloalkenyl, phenyl, naphthyl, $(C_1$ to C_{10}

7 alkyl)phenyl, (C_2 to C_{10} alkenyl)phenyl, (C_1 to C_{10} alkyl)-

8 naphthyl, $(C_2 \text{ to } C_{10} \text{ alkenyl}) \text{ naphthyl, phenyl} (C_1 \text{ to } C_{10} \text{ alkyl})$,

9 phenyl(C_2 to C_{10} alkenyl), naphthyl(C_1 to C_{10} alkyl) and

10 naphthyl(C₂ to C₁₀ alkenyl);

R being optionally substituted with C_1 to C_{10} alkyl,

12 C_2 to C_{10} alkenyl, C_1 to C_4 alkoxy, -OH, -SH, -CO $_2$ R 1 , C_3 to C_{10}

13 cycloalkyl, C_3 to C_{10} cycloalkenyl, heterocyclic having 3-10

14 ring atoms wherein the hetero atom is one or more atoms of N,

15 O, S or any combination thereof, aryl, $(C_1 \text{ to } C_{10} \text{ alkyl}) \text{ aryl}$,

16 aryl(C_1 to C_{10}) alkyl, or any combination thereof;

R being optionally interrupted by oxygen,

18 nitrogen, sulfur, or any combination thereof; and

19 R^1 is hydrogen, C_1 to C_4 alkyl or C_2 to C_4

20 alkenyl;

21 (b) a salt thereof; or

(c) a combination of (a) and (b).

- 2. The composition according to claim 1, wherein said biologically-active agent is selected from the group consisting of a peptide, a mucopolysaccharide, a carbohydrate, a lipid, a pesticide or any combination thereof.
- 3. The composition according to claim 1, wherein 1 said biologically-active agent is selected from the group 2 consisting of human growth hormone, bovine growth hormone, growth hormone-releasing hormone, an interferon, interleukin-4 insulin, heparin, calcitonin, 5 erythropoietin, 6 naturetic factor. an antigen, a monoclonal antibody,
- 7 somatostatin, adrenocorticotropin, gonadotropin releasing
- 8 hormone, oxytocin, vasopressin, cromolyn sodium, vancomycin,
- 9 desferrioxamine (DFO), or any combination thereof.

- 1 4. The composition according to claim 3, wherein
- 2 said biologically-active agent comprises an interferon,
- 3 interleukin-II, insulin, heparin, calcitonin, oxytocin,
- 4 vasopressin, cromolyn sodium, vancomycin, DFO or any
- 5 combination thereof.
- 1 5. The composition according to claim 4, wherein
- 2 said biologically-active agent is calcitonin.
- 1 6. The composition according to claim 4, wherein
- 2 said biologically-active agent is heparin.
- 1 7. The composition according to claim 6 for oral
- 2 administration to an animal wherein component (A) comprises 25
- 3 mg of heparin per kg of animal and component (B) compries 300
- 4 mg of cyclohexanecarboxylic acid per kg of animal.
- 1 8. The composition according to claim 1, wherein
- 2 R is C₃ to C₈ cycloalkyl.
- 1 9. The composition according to claim 8, wherein
- 2 R is cyclohexyl, cyclopentyl and cycloheptyl.
- 1 10. The composition according to claim 1, wherein
- 2 R is C_6 to C_{12} alkyl.
- 1 ll. The composition according to claim 8, wherein
- 2 R is C_7 to C_{10} alkyl.
- 1 12. The composition according to claim 1, wherein
- 2 R is substituted with alkoxy, -OH, or $-CO_2R^1$ wherein R^1 is
- 3 hydrogen, C_1 to C_4 alkyl, or C_2 to C_4 alkenyl.
- 1 13. The composition according to claim 10, wherein
- 2 R1 is hydrogen.

1 14. The composition according to claim 1, wherein 2 (B) is a compound having the formula:

1 15. The composition according to claim 1, wherein 2 (B) is a compound having the formula:

1 16. The composition according to claim 1, wherein 2 (B) is a compound having the formula:

1 17. The composition according to claim 1, wherein 2 (B) is a compound having the formula:

1 18. The composition according to claim 1, wherein 2 (B) is a compound having the formula:

4

5

6

7

8

9

1 19. The composition according to claim 1, wherein 2 (B) is a compound having the formula:

1 20. The composition according to claim 1, wherein 2 (B) is a compound having the formula:

1 21. The composition according to claim 1, wherein 2 (B) is a compound having the formula:

1 22. A dosage unit form comprising
2 (A) a composition according to claim 1; and
3 (B) (a) an excipient,

(B) (a) an excipient (b) a diluent,

(c) a disintegrant,

(d) a lubricant,

(e) a plasticizer,

(f) a colorant,

(g) a dosing vehicle, or

10 (h) any combination thereof.

1 23. A dosage unit form according to claim 20 2 comprising a tablet, a capsule, or a liquid.

3

- A method for administering a biologically-1 24. active agent to an animal in need of said agent, said method 2 comprising administering orally to said animal a composition 3 as defined in claim 1. 4 A method for preparing a composition, said 25.
- 1 2 method comprising mixing:
 - (A) at least one biologically-active agent; and
- (a) a compound having the formula: 4

5 R-CO₂H

wherein R is C_1 to C_{24} alkyl, C_2 to C_{24} alkenyl, C_3 to C_{10} cycloalkyl, C_3 to C_{10} cycloalkenyl, phenyl, naphthyl, $(C_1$ to C_{10} alkyl)phenyl, (C_2 to C_{10} alkenyl)phenyl, (C_1 to C_{10} alkyl)-
